

About the FSEP

The **RANZCOG FSEP** strives to deliver excellence in **fetal surveillance education**. It is based on an appreciation of the physiology of fetal heart rate control with the aim of reducing adverse perinatal outcomes.

Our **face-to-face** and **multidisciplinary** sessions are supported by our **assessment tool** and are delivered throughout Australia and New Zealand to professionals involved in **antenatal** and **intrapartum** care.

The face-to-face sessions are delivered by a team of **passionate** and **dedicated midwives** who have extensive **clinical** and **academic** qualifications.

Our **book**, **online program**, **teaching tools** and **mobile apps** support our face-to-face sessions.

FSEP incorporates the **current RANZCOG Intrapartum Fetal Surveillance Clinical Guideline**.

Recommended Pre-Reading

- **OFSEP** (RANZCOG FSEP Online Program)
- The current **RANZCOG Intrapartum Fetal Surveillance Clinical Guideline** PDF copy is available for download from FSEP and RANZCOG website.
- Baker L, Beaves M, and Wallace E. (2016) **Assessing Fetal Wellbeing: a practical guide.** *Monash Health and RANZCOG.*

Access and more information available from the FSEP website

Mobile Apps

The FSEP app is a useful educational tool, providing access to the RANZCOG, FSEP and OFSEP websites and current RANZCOG IFS Clinical Guideline.

It provides easy access to the standardised terms, physiological approach and management of the intrapartum CTG.

The app is available for download from **AppStore** and **Googleplay**.

www.fsep.edu.au

Online Programs

The OFSEP is a free online program:

- that offers individual login
- with capability to track individual progress
- online quizzes for each topic
- a certificate on completion
- available for a 12 month period (March to February) each year

Every March the course will be refreshed and be available for another 12 months.

Only one certificate will be issued for each completed course.
